

# NaturalStone™ Panel Surfaces

## The Strength of Metal, The Beauty of Stone

Enduring beauty. Lasting performance. With the newest applied surfaces by Insulated Panel Systems (IPS), you get the best of both worlds. Our NaturalStone™ product line is comprised of naturally colored quartz aggregates and synthetics, resulting in a stunning stone appearance that is surprisingly affordable. Combined with our state-of-the-art insulated metal panels, your building solution will boast the strength and efficiency of steel, with the architectural finish you desire.

### A NATURAL CHOICE FOR LASTING PANEL SYSTEMS

NaturalStone™ surfaces can be added to a wide variety of our insulated panel systems, giving your building a truly distinctive finish. You can choose from several exceptional IPS wall panel offerings, including:

#### IPP

An attractive flat wall panel that utilizes the Mesa profile on both panel surfaces. The product is designed for interior partition as well as exterior wall applications. This Tecfoam panel is filled with non CFC polyurethane modified isocyanurate foam, achieving R-values up to 40.0.

#### ESP

This architecturally pleasing panel is ideal for applications that require a flat appearance. Minor striations in the exterior skin provide for a linear appearance in vertical applications while blending well with the side joint of the panels. This Tecfoam panel will achieve R-values up to 40.0.

#### ABP

The ABP Wall Panel is similar in appearance to the IPP panel, with an exterior profile that is asymmetrical and has expanded flat areas to reduce shadow lines. As with all IPS panels, the interior skin is fabricated in the Mesa profile. The product is available in 2", 2-1/2" or 3" thick and can achieve R-Values to 23.9.

#### EWP

These wall panels offer contemporary styling in an easily installed product. The profile gives any building a strong vertical accent that is ideal for pre-engineered and conventional building construction. Minor flutes in the flat surface of the profile (EWP-F) are standard and designed to aid in reducing the potential for waviness or oil canning. Dimensions include nominal 36" coverage and thickness - 2", 2 1/2", 3", 4" and 5".

### CAREFULLY CRAFTED FOR INTEGRITY & ELEGANCE

NaturalStone™ makes it easy to achieve the perfect exterior innovation for your structure. Once you select the best combination of panel and surface options, the experts of IPS follow stringent quality guidelines to produce each and every coated panel.

All NaturalStone™ surfaces are applied in-house in a controlled environment, so products are delivered onsite already customized to your specific needs. Coatings are spray applied in the factory directly to the exterior skin of each panel. Contractors benefit from this in-house technique, which enables the finished panel to be successfully installed in cold and wet climates.

Our textured finishes have undergone extensive freeze and thaw cycle testing to support excellent adhesion on metal surfaces. Superior foam core and metal surfaces serve to ensure that moisture cannot penetrate the building interior. In addition, IPS stands behind its work by offering a limited 10-year warranty for any NaturalStone™ purchase.

**A PALLET OF NATURALSTONE™ OPTIONS TO INSPIRE YOUR NEXT BUILDING**

Give your best building projects a finish to remember. Add any of our vibrant NaturalStone™ surfaces for a remarkable stone appearance that lasts.
